

FLOWEXA

The Booked Job Playbook™

A practical operating system for turning existing demand into more booked, completed and collected jobs.

For operators who already have demand.

This is about converting more of the demand you already paid for into booked jobs, completed work and cash.

1. Start with the economics, not the logo

If I were starting a home-service company today, I would build around one number: contribution profit per booked job. The website, ads, trucks and software are downstream of that.

Before adding channels, calculate average ticket, gross margin, close rate, cancellation rate, lead cost and capacity. Then set a target for qualified opportunities per week.

- Pick one profitable service + one geography before expanding.
- Know your minimum acceptable job value and your fastest-to-cash service.
- Track leads → conversations → estimates → booked jobs → completed jobs → collected revenue.
- Do not confuse lead volume with business health. A full CRM can hide a weak booking machine.

2. Own the first five minutes

The highest-value automation is usually not futuristic. It is responding while the prospect is still shopping. Your system should acknowledge the inquiry, identify intent, capture the essentials and create the next step.

For phone leads, missed-call recovery matters. For web leads, speed-to-lead matters. For both, the handoff must be explicit: booked, scheduled, or queued for human follow-up.

- Create a response standard measured in minutes, not hours.
- Ask only questions that change routing, qualification or scheduling.
- Give the prospect a clear next action instead of a generic 'we'll get back to you.'

3. Engineer the booking path

A good booking system removes decisions. Service type, location, urgency, basic qualification and availability should flow into one clean appointment path.

Do not automate the parts that require judgment before you understand them. First make the manual process repeatable; then automate the repetitive steps.

- Build one preferred booking route.
- Use calendar-aware scheduling to prevent double booking.
- Create a human escalation rule for high-value or unusual jobs.
- Measure contact-to-booked rate separately from lead-to-booked rate.

4. Make follow-up a system

Most businesses have a follow-up problem disguised as a lead problem. Every unbooked lead should have a next action, owner and deadline.

Use a short, useful sequence: acknowledge → clarify → proof/answer → availability → final check-in. Stop when the prospect responds, books, opts out or becomes clearly unqualified.

- Separate speed from persistence: reply fast, then follow up deliberately.
- Use service-specific proof and FAQs rather than generic marketing copy.
- Have a stale-lead recovery queue for opportunities that went quiet.

5. Only then add AI + automation

AI becomes valuable after the process is known. Use it to handle classification, summaries, draft replies, intake, routing, missed-call recovery and reporting—not to invent a process you have not measured.

A mature stack should leave the owner with fewer decisions, not more dashboards.

- Automate repetitive intake and qualification.
- Summarize calls and conversations into the CRM.
- Trigger follow-up from actual events: inquiry, estimate sent, no response, appointment missed, job completed.
- Review exceptions weekly and improve the system from real failures.
