Revenue Recovery Map™

A field guide to finding and recovering revenue already sitting inside your lead pipeline.

For operators who already have demand.

This is about converting more of the demand you already paid for into booked jobs, completed work and cash.

1. Find money you already paid to acquire

Revenue recovery starts with existing demand. Pull the last 30–90 days of leads and classify every record: booked, lost, unreachable, no-show, estimate sent/no decision, cancelled, completed/unpaid.

- Start with records that have both high intent and high job value.
- Calculate recovered revenue separately from new-lead revenue.
- Never call a lead 'lost' until your defined follow-up window is complete.

2. Fix missed-call leakage

A missed call is an open loop. The recovery system should acknowledge it, offer a simple path to book or reply, and alert a human when the opportunity is valuable or urgent.

- Trigger recovery immediately after an unanswered call where technically possible.
- Offer text/web booking instead of forcing another phone attempt.
- Escalate emergency or high-value service requests.

3. Recover estimates that stalled

The estimate follow-up sequence should not be 'just checking in.' Each touch should remove a reason for delay: uncertainty, timing, scope, price, trust or competing priorities.

- Use estimate-specific questions.
- Give a clear next step and a real availability window.
- Create a manager queue for large estimates with no decision.

4. Recover cancellations and no-shows

A cancellation is not automatically a dead lead. Separate genuine loss from scheduling friction. Make rescheduling easy and capture the reason so the system learns.

- Automate reminders and reschedule links.
- Track cancellation reasons by service and lead source.
- Measure recovered appointments, not just reminder sends.

5. Build the recovery dashboard

Your weekly owner view should answer: how much demand entered, how much booked, where it stalled, how much revenue was recovered, and which failure mode is growing.

- Track recovery rate by source and service.
- Rank leaks by dollars, not by number of leads.
- Fix the biggest economic leak before adding another marketing channel.
